BULK CLEANING WANDS

The right tool for the right job... The VAC-U-MAX bulk cleaning Wand is designed for fast, productive, continuous pickup of piles ranging from 50-pound accumulations to thousand-pound bulk spills. Our bulk cleaning wands can be buried in a pile of dry material and still provide conveying air to move the material through the vacuum hose. The operator can adjust the air bleed collar to suit the amount of aeration required for optimum performance. The curve at the top of the wand allows the hose to hang normally and avoids excess wear and tear on the hose at that location. The adjustable ergonomic handle bar and 36" height reduce back strain. Works

equally well with lightweight fluffy powders and high-density sand or steel powders. Rugged carbon steel welded construction with an abrasion-resistant inlet collar and powder coat finish insure a long life for this tool. Available with or without camlock adaptor for secure hose connection.

Wand with tube shank
